Plain English summary of protocol

Background and study aims

In this study, patients with bladder cancer were examined to analyze the levels of RBM15 in both cancerous and normal tissues. The goal was to identify potential therapeutic targets that could be used to treat bladder cancer more effectively.

Who can participate?

Patients diagnosed with bladder cancer

What does the study involve?

Participants joined the study starting in March 2018 and for 6 years. This study collects tissue samples at the time of surgery and follows participants for 6 years. Patients are followed up annually by telephone for survival. Cancerous and normal tissues were collected from patients with bladder cancer.

What are the possible benefits and risks of participating?

The study team provided 1000 RMB as compensation for each patient. In this study, the discarded tumor tissue was removed during the patient's operation, which did not affect the body and no other participation risks were anticipated.

Where is the study run from?

The study was conducted in Affiliated Haikou Hospital of Xiangya Medical College

When is the study starting and how long is it expected to run for?

March 2022 to June 2024

Who is funding the study?

1. Finance Science and Technology Project of Hainan Province
2. National Science Foundation of China
3. Health Department of Hainan Province

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Bladder cancer

Interventions

This study enrolls patients with bladder cancer, collects tissue samples at the time of surgery, and follows them for 6 years. Patients are followed up annually by telephone for survival.

Cancerous and normal tissues were collected from patients with bladder cancer.

Intervention Type

Other

Primary outcome(s)

Survival measured using data collected at an annual telephone call for 6 years

Key secondary outcome(s)

Transfer or not measured using data collected during a telephone call every 6 months

Completion date

12/06/2024

Eligibility**Key inclusion criteria**

Patients who were diagnosed with bladder cancer

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Mixed

Sex

All

Key exclusion criteria

Patients with other cancers
