Improving diversity in clinical research for patients undergoing surgery (PROTECT-DIVERSITY)

Submission date 26/11/2025	**Recruitment status** Recruiting	[X] Prospectively registered [X] Protocol [_] Statistical analysis plan [_] Results [_] Individual participant data [X] Record updated in last year
Registration date 04/12/2025	**Overall study status** Ongoing	
Last Edited 13/03/2026	**Condition category** Surgery	

Plain English summary of protocol

Background and study aims
The lack of diversity in clinical trials is an important issue, which limits external validity. We are doing this study to check whether consent forms in several different languages can improve access to research for patients having surgery. We will also compare the accuracy and completeness of diversity data collection using different methods such as in your medical records, as part of questionnaires and by asking participants questions.

Who can participate?
Adults aged 18 years and over undergoing elective surgery.

What does the study involve?
Patients will be asked to consent to be part of the PROTECT Trial. The consent materials will either be in a traditional paper format or an electronic format, assigned at random. Information such as sex, ethnicity, partnership status, disability, pregnancy status, religion, sexual orientation, gender and gender identity will be collected as part of the PROTECT trial, and patients can refuse to answer any questions they do not want to.

What are the possible benefits and risks of participating?
The information collected may improve how we collect diversity information for patients taking part in clinical trials in the future. There are no disadvantages to taking part in this study.

Where is the study run from?
Queen Mary University of London (UK)

When is the study starting and how long is it expected to run for?
The study is starting in December 2025 and will run for 2 years.

Who is funding the study?
The British Journal of Anaesthesia and the Academy of Medical Sciences

Who is the main contact?
Dr Tom Abbott, protect-admin@qmul.ac.uk

Study information

Scientific Title
Diversity in perioperative research

Acronym
PROTECT-DIVERSITY

Study objectives
1. Compare the impact of using multi-lingual consent forms with consent forms in English on the ethnic diversity of patients included in the study.
2. Compare the accuracy and completeness of protected characteristics data collection using different methods.

Ethics approval required
Ethics approval required

Ethics approval(s)

approved 10/02/2025, London – South East Research Ethics Committee (2 Redman Place, Stratford, London, E20 1JQ, United Kingdom; +44 207 104 8222; londonsoutheast.rec@hra.nhs.uk), ref: 24/LO/0887

Primary study design
Interventional

Allocation
Randomized controlled trial

Masking
Open (masking not used)

Control
Active

Assignment
Single

Purpose
Health services research

Study type(s)

Health condition(s) or problem(s) studied
Adult patients undergoing elective surgery

Interventions
The master protocol is registered at https://www.isrctn.com/ISRCTN14639555

The method of informed consent will use either an electronic or paper method, which is consistent with the master protocol. For this comparison, the mode of consent (electronic or paper) will be determined at random before approaching the patient, which includes consent for entry into the platform. Since the intervention in question is the process of consent, it will not be possible to obtain consent before the 'intervention' i.e. the consent process. In this case, there will be a waiver of consent to randomise to intervention or usual care (electronic consent or paper consent). After randomisation, the patient will complete the consent process using either electronic multi-lingual consent documents or paper consent documents in English, according to group allocation. This process supersedes the procedure for timing of informed consent detailed in the master protocol section nine, which will apply to consent for inclusion in the platform (master protocol) and this comparison. Electronic consent materials will be translated into Polish, Romania, Panjabi, Urdu and Portuguese, which are the five most common languages for people where English/Welsh is not their first language. Translations will be undertaken by an approved/certified provider

Intervention Type
Other

Primary outcome(s)
Reciprocal diversity index for ethnicity on a scale of 0 to 100 at end of trial

Key secondary outcome(s))
1. Completeness of data collection for protected characteristics at trial end
2. Degree of agreement for protected characteristics data between data collection modalities at trial end

Completion date
01/02/2027

Eligibility

Key inclusion criteria
1. Patients aged 18 years and over undergoing elective surgery

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Mixed

Lower age limit
18 years

Upper age limit
100 years

Sex
All

Total final enrolment
0

Key exclusion criteria
1. Inability to provide informed consent
2. Co-enrolment in PROTECT CTIMP comparisons
3. Previous enrolment to the PROTECT-DIVERSITY comparison

Date of first enrolment
06/03/2026

Date of final enrolment
01/01/2027
