Study information

Scientific Title
Bordetella pertussis serology in pregnancy

Acronym
Kinkzwang

Study objectives
About 6% of the population between three and 79 years suffers each year of a B. pertussis infection, including pregnant women. These women are a source of infection for their newborn babies.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Approval received from the local medical ethics committee (Commissie Medische Ethiek, Leids Universitair Medisch Centrum, Leiden) (ref: P02-205).

Primary study design
Observational

Study design
Observational, single centre, cross-sectional survey

Study type(s)
Screening

Health condition(s) or problem(s) studied
B. pertussis infection in pregnancy

Interventions
Serology for Immunoglobulin G (IgG) against pertussis toxin in blood of the mother and cord blood. The test used is the test as used by the National Institute for Public Health and the Environment (RIVM) (The Netherlands).

Intervention Type
Other

Phase
Not Specified

Primary outcome(s)
1. Positive B. pertussis serology
2. Cata questionnaires

Key secondary outcome(s)
No secondary outcome measures

Completion date
01/06/2006

Eligibility

Key inclusion criteria
All pregnant women delivering at the department of gynecology and obstetrics of the Groene Hart Hospital.

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Adult

Sex
Female

Key exclusion criteria
Does not comply with the above inclusion criteria

Date of first enrolment
01/08/2002

Date of final enrolment
01/06/2006

Locations

Countries of recruitment
Netherlands

Study participating centre
Groene Hart Hospital
Gouda
Netherlands
