Study information

Scientific Title

Study objectives

Does preoperative hyperoxia therapy reduce the serum levels of S100b protein, InterLeukin-6 (IL6), InterLeukin-8 (IL8), L-selectin, P-selectin, Inter-Cellular Adhesion Molecule 1 (ICAM-1), and improve neurological outcome in patients undergoing cardiopulmonary bypass?

Primary study design

Interventional

Study design

Randomised controlled trial

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Cardiovascular: Cardiopulmonary bypass

Interventions

Randomised controlled trial comparing:

1. Hyperoxia therapy
2. No therapy

Study patients will receive the same intra-operative, postoperative and follow-up care as routine patients and as per unit protocol. A 30-day postoperative neuropsychological assessment will be undertaken. The patient will continue to receive routine postoperative follow-up care as per unit protocol.

The patients will undergo three sessions of hyperoxia therapy in the hyperbaric chamber situated at the BUPA Hospital, Anlaby Road, Hull. Each therapy consists of three 20-minute sessions in the hyperbaric chamber breathing 100% O₂ at 2.5 atmospheres interspread with five minutes of air breathing.

Blood samples will be taken for estimation of serum IL6, IL8, sE-selection, ICAM-1 and neutrophil CD18. This will be taken immediate pre-operation, at the end of the operation, 12 hours, 24 hours, 48 hours and fifth day post-operation. Blood samples for estimation of S100B will be taken immediate pre-operation, at the end of the operation, two hours and four hours after the operation.

A baseline neuropsychological test will be done within 24 h prior to the operation. The first postoperative assessment will be carried out when the performance is more stable, that is, three months postoperatively. To ensure objectivity and reliability of the assessment, the testing of each patient will be undertaken by the same doctor.

Intervention Type

Phase

Not Specified

Primary outcome(s)

Data collected will be entered into the research department computer and statistical analysis will be done using the Stars Direct Package. Demographics, measures and results of data analysis will be represented as tables, graphs, bar charts and pie charts where applicable. Statistical significance will be set at $P\text{-value} < 0.05$.

Key secondary outcome(s)

Not provided at time of registration

Completion date

15/01/2004

Eligibility**Key inclusion criteria**

A total of 50 patients (25 each group), between 20 and 75 years of age undergoing cardiopulmonary bypass.

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

Not Specified

Key exclusion criteria

Not provided at time of registration

Date of first enrolment

07/10/2002

Date of final enrolment

15/01/2004

Locations**Countries of recruitment**
