Plain English summary of protocol

Background and study aims

COVID-19 is a condition caused by the coronavirus (called SARS-CoV-2) that was first identified in late 2019. This virus can infect the respiratory (breathing) system. Some people do not have symptoms but can carry the virus and pass it on to others. People who have developed the condition may develop a fever and/or a continuous cough among other symptoms. This can develop into pneumonia. Pneumonia is a chest infection where the small air pockets of the lungs, called alveoli, fill with liquid and make it more difficult to breathe.

In 2020, the virus has spread to many countries around the world and neither a vaccine against the virus or specific treatment for COVID-19 has yet been developed. As of March 2020, it is advised that people minimize travel and social contact, and regularly wash their hands to reduce the spread of the virus.

Groups who are at a higher risk from infection with the virus, and therefore of developing COVID-19, include people aged over 70 years, people who have long-term health conditions (such as asthma or diabetes), people who have a weakened immune system and people who are pregnant. People in these groups, and people who might come into contact with them, can reduce this risk by following the up-to-date advice to reduce the spread of the virus.

CORONATION is an observational registry which will look at the spread and the severity of COVID-19 in the UK and internationally. By building a database of patients it will allow for the identification of risk factors for disease progression and severity. It will also establish the patterns of disease transmission, and allow for the evaluation of the impact COVID-19 has on the healthcare system.

Who can participate?

All cases of COVID-19.

What does the study involve?

Care teams will collect demographic and clinical data on confirmed COVID-19 cases and enter this information into a database. This will be undertaken through a simple enrollment process and linkage with other datasets.

What are the possible benefits and risks of participating?

Benefits: contributing to the fight against COVID19 by helping doctors and the NHS to understand how people are affected by COVID19.

As this is an observational study there are no risks associated with participation.

Where is the study run from?

Addenbrookes Hospital (UK)

When is the study starting and how long is it expected to run for?

April 2020 to April 2025

Who is funding the study?

Cambridge Biomedical Research Centre (UK)

Who is the main contact?

Unfortunately, this study is not recruiting public volunteers at this time. This is because the research isn't ready for volunteers yet or the researchers are directly identifying volunteers in certain areas or hospitals. Please do not contact the research team as they will not be able to respond. For more information about COVID-19 research, visit the Be Part of Research homepage.

Health condition(s) or problem(s) studied

COVID-19 (SARS-CoV-2 infection)

Interventions

The CORONATION registry is a patient-level disease registry capturing identifiable patient data on UK COVID-19 cases and anonymised or identifiable data on international COVID-19 cases.

Care teams will collect demographic and clinical data on confirmed COVID-19 cases and enter this information into a database. This will be undertaken through a simple enrollment process and linkage with other datasets.

Baseline data collected will include baseline demographic data, baseline clinical data (comorbidities, medication, COVID-19 status and symptoms).

Intervention Type

Other

Primary outcome(s)

Demographic and clinical data on confirmed COVID-19 cases (comorbidities, medication, COVID-19 status and symptoms) collected regularly from participating centres by entering data into an online portal

Key secondary outcome(s)

There are no secondary outcome measures

Completion date

24/04/2025

Eligibility

Key inclusion criteria

All COVID-19 cases are eligible for inclusion (COVID-19 cases that pre-deceased the start of the registry are eligible)

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

All

Sex

All

Key exclusion criteria

Does not meet inclusion criteria

Date of first enrolment

30/07/2020

Date of final enrolment

24/04/2024
