Study information

Scientific Title
Immune activation in chronic heart failure and the role of endotoxin

Study objectives

To investigate whether CHF is associated with immune dysregulation and to establish whether endotoxin levels are increased in heart failure patients and whether an endotoxin challenge is a component of immune activation in patients with severe CHF. Study could lead to new therapeutic insights and could contribute to the development of new therapeutic strategies for immune activation in CHF and a syndrome currently without effective treatment ie cardiac cachexia.

Primary study design

Interventional

Study design

Randomised controlled trial

Study type(s)

Not Specified

Health condition(s) or problem(s) studied

Cardiovascular: Chronic heart failure

Interventions

Study A: Randomised Controlled Trial (10 cachetic and 10 non-cachetic stable CHF patients, and 10 controls)

Study B: Cohort Observation (10 CHF patients presenting acute oedematous exacerbation)

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

Not provided at time of registration

Key secondary outcome(s)

Not provided at time of registration

Completion date

29/06/2006

Eligibility**Key inclusion criteria**
