Study information

Scientific Title

Metformin improves Endothelial function, endothelial progenitor cells and cardiovascular Risk factors In Type 1 diabetes (MERIT study)

Acronym

MERIT

Study objectives

The aim is to examine the mechanism behind the beneficial cardiovascular effects of metformin. This will be achieved by studying the effect of metformin on endothelial progenitor cells (EPCs), their in vitro function and endothelial function in patients with type 1 diabetes.

Ethics approval required

Old ethics approval format

Ethics approval(s)

NRES Committee North East - Sunderland, 12/04/2012, ref: 12/NE/0044

Primary study design

Observational

Study design

Observational study

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Type 1 diabetes and cardiovascular disease

Interventions

Patients will be assessed before and after metformin therapy. Prior to commencement of metformin patients will undergo 6 weeks running in period to monitor their glycaemia and exclude presence of hypo-unawareness. During the 8 week study with metformin 500mg patients will aim to achieve unchanged glucose levels. This may require a reduction of insulin doses for the time of the study. The vascular assessment will include measurement of EPCs from peripheral blood, cultured early EPCs and their function in vitro and RNA studies. Patients will have their endothelial function assessed by EndoPAT.

Follow Up Length: 3 month(s)

Intervention Type

Other

Phase

Not Applicable

Primary outcome(s)

1. EPCs
2. Hill Colony Assay
3. Endothelial function

Measured before and after metformin therapy

Key secondary outcome(s)

No secondary outcome measures

Completion date

01/04/2015

Eligibility

Key inclusion criteria

1. Type 1 diabetes mellitus
2. Aged 16 years or over
3. HbA1c $\leq$ 8.5
4. Duration of diabetes of at least 5 years
5. Stable diabetes control for at least 2 months

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

All

Key exclusion criteria

1. Glomerular filtration rate (GFR) < 45 ml/ min/ 1.73m^2
2. Woman of childbearing age planning pregnancy
3. Pregnancy and/or lactation
4. Proliferative diabetic retinopathy
5. Cardiovascular disease/ischemic heart disease (IHD)
6. Peripheral vascular disease
7. Cerebrovascular accident (CVA) or transient ischemic attack (TIA)
8. Suspected hypoglycaemia unawareness
9. Impaired cognitive function/ unable to give informed consent
10. History of lactic acidosis
11. Contraindications to metformin
12. History of alcohol problem or drug abuse

Date of first enrolment

28/05/2012

Date of final enrolment

01/04/2015
