Study information

Scientific Title

Study objectives
Using a randomised controlled design we propose to investigate
1. Whether an epidural technique which provides minimal motor block is associated with differences in the more traditional technique and
2. Whether there are any variations in these respects between two different types of minimal motor block epidural techniques.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Study design
Randomised controlled trial

Primary study design
Interventional

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Pregnancy and childbirth: Pregnancy

Interventions
Not provided at time of registration

Intervention Type
Other

Phase
Not Applicable

Primary outcome(s)
To evaluate the implications for midwifery practice of the new techniques in comparison with non-mobile epidurals.

Key secondary outcome(s))
Not provided at time of registration

Completion date
01/08/1998

Eligibility

Key inclusion criteria
Not provided at time of registration

Participant type(s)

Patient

Healthy volunteers allowed
No

Age group
Adult

Sex
Female

Key exclusion criteria
Not provided at time of registration

Date of first enrolment
01/02/1997

Date of final enrolment
01/08/1998
