Plain English summary of protocol

Background and study aims:

Music medicine may decrease anxiety and depression in cancer patients, but the mechanism by which this happens is not known. Therefore, the aim of this study is to determine the effects and underlying thematic perspectives of music medicine on anxiety and depression in cancer inpatients.

Who can participate:

Qualifying cancer inpatients aged 18 years and older at Cooper University Hospital

What does the study involve?

The participant will be asked to complete a short survey which should take about 10 minutes. The participant will also be asked to listen to live music in the comfort of their own room for about 15 minutes. The participant will then complete a second, short survey, which should take about 10 minutes.

What are the possible benefits and risks of participating?

Benefits of participating in this study include the entertainment value of experiencing live music in the comfort of ones' hospital bed and a possible decrease in anxiety and depression. Additionally what is learned from the study may benefit cancer patients in the future. There are minimal risks associated with this survey and the study team does their best to minimize them. However, some of the questions may be about sensitive issues, which may be uncomfortable for some.

Where is the study run from?

Cooper University Hospital Cancer (USA)

When is the study starting and how long is it expected to run for?

June 2020 to July 2021

Who is funding the study?

Investigator initiated and funded

Who is the main contact?

Michael Rosenheck, michaelrosenheck@gmail.com

Study information

Scientific Title

Quantitative and qualitative effects of live music medicine on anxiety and depression in cancer inpatients

Study objectives

Live music medicine decreases self-reported symptoms of anxiety and depression in cancer inpatients through a variety of previously postulated thematic prospective.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Approved 18/03/2021, Cooper University Hospital Institutional Review Board (1 Cooper Plaza, Camden, NJ 08103, USA; +1 (0)800 826 6737; IRBOnlineHelp@cooperhealth.edu), ref: IRB#21-014

Study design

Single-center prospective cohort study

Primary study design

Observational

Study type(s)

Quality of life

Health condition(s) or problem(s) studied

Anxiety and depression in cancer inpatients

Interventions

Twenty-four cancer inpatients participated in this prospective cohort study to measure the effects of a private, 15-minute, live guitar/singing performance on anxiety and depression. Questions modified from the Hospital Anxiety and Depression Scale (HADS) and a written free response section were used. The most frequently used words within the free response sections were made into a word cloud and evaluated based on their thematic perspective.

Intervention Type

Behavioural

Primary outcome(s)

Anxiety and depression measured using a modified Hospital Anxiety and Depression Scale (HADS) questionnaire 1 hour before and immediately after the live musical performance

Key secondary outcome(s)

1. Thematic perspectives analyzed through a word cloud of most used words by patients on the post-performance free-response question immediately after the live musical performance
2. Change in self-described relationship to music measured via survey 1 hour before and immediately after the live musical performance
3. Age range, gender, and frequency of live musical performance attendance measured by pre-performance surveys

Completion date

29/07/2021

Eligibility

Key inclusion criteria

1. Patients aged 18 years and older
2. Cancer diagnosis
3. Roomed on the cancer inpatient floor of Cooper University Hospital

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Lower age limit

18 years

Sex

All

Total final enrolment

24

Key exclusion criteria

1. Those who are deaf
2. Unable to read, write, or comprehend the survey
3. Had previously participated in the study
4. Under 18 years old
5. On end-of-life care or too critically ill to participate
6. Those that have more than one patient per room
7. The clinical team did not authorize the encounter

Date of first enrolment

01/04/2021

Date of final enrolment

29/07/2021
