Study information

Scientific Title

Study objectives
Ciprofloxacin plus rifampicin may be an alternative treatment regimen to doxycycline plus streptomycin in the treatment of spinal brucellosis

Ethics approval required
Old ethics approval format

Ethics approval(s)
Yes, Approved by the Ethical Committee of Erciyes University, approval date: 4/05/2001, reference number: 04/131

Primary study design
Interventional

Study design
An open, controlled and non-randomized trial

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Brucellosis is an infectious disease affecting multiple systems including vertebrae

Interventions
To compare the efficacy, adverse drug reactions, complications and cost of ciprofloxacin plus rifampicin versus doxycycline plus streptomycin in the treatment of spinal brucellosis

Intervention Type
Drug

Phase
Not Specified

Drug/device/biological/vaccine name(s)
Doxycycline, streptomycin, ciprofloxacin, rifampicin

Primary outcome(s)
1. Clinical efficacy of ciprofloxacin plus rifampicin in spinal brucellosis
2. The prevalence of relapses

Key secondary outcome(s)
The cost of the two regimens

Completion date
31/12/2004

Eligibility

Key inclusion criteria

The patients diagnosed with spinal brucellosis between January 2002 to December 2004 were enrolled into two study groups consecutively

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Adult

Sex
All

Key exclusion criteria
1. Age less than 16 years
2. Pregnancy
3. Neurobrucellosis
4. Previous history of brucellosis and antimicrobial therapy and discontinuation of the therapy for any reason (allergy to any of the drugs, death, adverse reactions)

Date of first enrolment
01/01/2002

Date of final enrolment
31/12/2004

Locations

Countries of recruitment
Türkiye

Study participating centre
