Study information

Scientific Title

Study objectives

To determine whether the use of a *Helicobacter pylori* 'test and treat' strategy in general practice was associated with any improvement in clinical outcome or resource utilisation.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Peptic ulcer disease

Interventions

Randomised trial comparing a *Helicobacter pylori* test-and-treat strategy with referral to direct access endoscopy in the management of dyspepsia in general practice.

Intervention Type

Drug

Phase

Not Applicable

Drug/device/biological/vaccine name(s)

Helicobacter pylori

Primary outcome(s)

1. Health care utilisation
2. Consulting rates
3. Prescribing rates

Key secondary outcome(s))

No secondary outcome measures

Completion date

01/09/1998

Eligibility**Key inclusion criteria**

A control group of practices in south east London pursuing 'usual' management of Helicobacter pylori, including endoscopy compared with a study group in which a near-patient test kit for Helicobacter pylori was provided for use on all patients under the age of 45 with persistent dyspepsia.

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

All

Key exclusion criteria

Does not meet with inclusion criteria

Date of first enrolment

01/05/1995

Date of final enrolment

01/09/1998
