Study information

Scientific Title

Acronym

GlivecGG

Study objectives

The aim is to assess the pharmacokinetics and efficacy of imatinib in patients with bile duct cancer and to test Positron Emission Tomography (PET) as a diagnostic tool.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Approved by the Local Ethics Committee of Leipzig University on 28 November 2005.

Primary study design

Interventional

Study design

Non-randomised open label multicentre study

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Non-resectable bile duct cancer

Interventions

1. Continuous second line chemotherapy with imatinib - assessment of response by tumor marker and imaging during follow-up
2. Generation of pharmacokinetic data during the first two days of drug administration and during the following weeks
3. Assessment of the efficacy of PET for evaluation of early treatment response

Added 01/09/09: trial was stopped prematurely due to a lack of a sufficient number of patients (9 in three and a half years).

Intervention Type

Drug

Phase

Not Specified

Drug/device/biological/vaccine name(s)

Imitanib (Glivec)

Primary outcome(s)

1. Response rate
2. Median duration of objective remission

Key secondary outcome(s)

1. Time to progression
2. Median survival
3. Tumor response after one week or three months by 18-fluorodeoxyglucose-Positron Emission Tomography (18 FDG-PET)
4. Toxicity
5. Pharmacokinetics

Completion date

28/02/2010

Reason abandoned (if study stopped)

Participant recruitment issue

Eligibility

Key inclusion criteria

1. Two-dimensional detectable tumors or metastasis
2. Aged between 18 and 75 years
3. General condition - World Health Organisation (WHO) <2
4. Live expectancy of at least three months
5. Informed consent
6. Bilirubin not to be elevated more than upper normal value (1.5 times in the presence of liver metastasis) and alanine aminotransferase (ALT) or aspartate aminotransferase (AST) more than 1.5 times (2.5 times in the presence of liver metastasis) of the upper normal value
7. Creatinine <133 µmol/l (<1.5 mg/l), creatinine clearance >60 ml/min

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Lower age limit

18 Years

Sex

All

Key exclusion criteria

1. Pregnant and lactating women, fertile men and women without adequate contraception
2. Patients that have not received primary chemotherapy
3. Pre-operated tumor recurrence
4. Tumor extent >50% of the liver or >25% of the lung, abdominal mass >10 cm, Central Nervous System (CNS) metastasis
5. Ileus
6. Non-measurable tumor

7. Known intolerance to imatinib and its preservatives
8. Second malignancy
9. Second unstable disease
10. Co-medication with non-approved drugs
11. Any other anti-cancer treatment
12. Co-medication with paracetamol

Date of first enrolment

01/03/2006

Date of final enrolment

28/02/2010
