Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Study design
Randomised controlled trial

Primary study design
Interventional

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Recurrence of bleeding peptic ulcers

Interventions
Added as of 09/11/2009: Please note that this trial did not start as similar studies were carried out by other research groups.

Interventions:

Patients were randomised to receive:
1. Either a one week course of triple therapy with bismuth subcitrate, metronidazole, and tetracycline plus ranitidine, or
2. A six week course of ranitidine 300 mg/day.

After the ulcers healed, the antibiotic-treated patients were not given any medication whereas the ranitidine-treated patients continued to receive a maintenance dose of ranitidine 150 mg /day.

Intervention Type
Drug

Phase
Not Specified

Drug/device/biological/vaccine name(s)
Bismuth subcitrate, metronidazole, tetracycline, ranitidine

Primary outcome(s)
Not provided at time of registration

Key secondary outcome(s))
Not provided at time of registration

Completion date
01/10/2003

Reason abandoned (if study stopped)
Objectives no longer viable

Eligibility

Key inclusion criteria
1. Patients over the age of 16
2. Confirmed bleeding from either Duodenal (DU) or Gastric (GU) ulcers with or without stigmata of recent haemorrhage
3. A positive rapid urease test

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Adult

Sex
All

Key exclusion criteria
