Study information

Scientific Title

Human Papillomavirus (HPV) testing on self-collected samples to increase uptake of cervical screening in non-attenders: a pilot study

Study objectives

The aim of this study is to assess the feasibility and acceptability of offering vaginal self-sampling for HPV testing in general practice to cervical screening non-attenders to increase coverage.

Ethics approval required

Old ethics approval format

Ethics approval(s)

South East Coast – Brighton & Sussex Research Ethics Committee, 24/10/2013, ref: 13/LO/1441

Primary study design

Interventional

Study design

Non-randomised; Interventional; Design type: Screening

Study type(s)

Screening

Health condition(s) or problem(s) studied

Topic: Primary Care Research Network for England; Subtopic: Not Assigned; Disease: All Diseases

Interventions

Women aged 28-64 who are at least 6 months overdue their smear will be flagged in the EMIS electronic patient record system at GP surgeries. GPs, nurses and healthcare practitioners will be asked to offer flagged women a self-sampling study kit for HPV testing, when they consult for any reason. Women will take their sample in the GP surgery bathrooms or at home. Samples will be analysed by Barts Health NHS Trust pathology lab.

Results will be sent to the women via post. Women who test HPV negative will be exited from the study. Women who test HPV positive will be asked to attend their GP surgery for a smear. Women who attend for a smear will be managed according to their cytology (as usual) on the NHS Cervical Screening Programme. Women who test HPV positive and have not attended for a smear by the end of the study will be invited for a study colposcopy at Whipp's Cross Hospital.

Intervention Type

Other

Phase

Not Applicable

Primary outcome(s)

Proportion of women who return a self-collected sample for HPV testing measured at the end of the study

Key secondary outcome(s)

1. Proportion of women who are found to have cervical intraepithelial neoplasia; Timepoint(s): End of study
2. Proportion of women who are found to test HPV positive; Timepoint(s): End of study

Completion date

15/04/2015

Eligibility

Key inclusion criteria

Women aged 28-64 years who are eligible for cervical screening and are at least 6 months overdue (i.e. no cervical cytology recorded in the GP records in the past 3.5 years if aged 28-49 or 5.5 years if aged women 50-64)

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

Female

Key exclusion criteria

1. Women unable to provide informed consent (e.g. because of learning difficulties)
2. Women whose command of English is not sufficient to obtain informed consent
3. Women in whom cervical screening is inappropriate, for example because they are pregnant or terminally ill

Date of first enrolment

22/12/2013

Date of final enrolment

05/12/2014
