Study information

Scientific Title

Study objectives
From the viewpoint of both primary and secondary care, what is the effect of a patient held shared record card on the pattern of service use and satisfaction with medical care for people with long term mental illness, compared to current practice?

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Primary study design
Interventional

Study design
Cluster randomised controlled parallel group trial

Study type(s)
Other

Health condition(s) or problem(s) studied
Schizophrenia and other psychoses

Interventions
Randomly selected patients entered on the North Birmingham Community District Mental Health Team's "community team case load census" database will be randomised:
1. Patient-held records
2. Current practice
100 patients will be required for each arm of the study. To avoid contamination bias, patients in the study and control arm will be drawn from different general practices.

Intervention Type
Other

Phase
Not Applicable

Primary outcome(s)
1. Adherence with treatment
2. Loss to follow up
3. Satisfaction with medical care
4. Number of psychiatric admissions/year
5. Length of inpatient stay

Key secondary outcome(s)
Not provided at time of registration

Completion date
31/07/2001

Eligibility

Key inclusion criteria
All patients with more than 2 years history of schizophrenia or other psychoses, severe personality disorder, or severe neurosis who require long-term supervision.

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Adult

Sex
All

Key exclusion criteria
1. Dementia, or other brain disorder
2. Alcohol or drug misuse
3. Learning disability
4. 15 years or under
5. 65 year or older.

Date of first enrolment
01/11/1997

Date of final enrolment
31/07/2001
