Primary study design
Interventional

Study design
Randomised controlled trial

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Chronic adhesive capsulitis

Interventions
Patients with suspected chronic adhesive capsulitis, as indicated by painful and limited shoulder movement during the doctor's and physiotherapist's assessment will be offered participation in this study. This will involve random allocation to one of three groups: a control group receiving rest and advice only, a physiotherapy group receiving a combination of manual therapy and therapeutic exercise, and an osteopathy group receiving a combination of osteopathic manual therapy and exercise.

Intervention Type
Other

Phase
Not Specified

Primary outcome(s)
