Study information

Scientific Title
Randomised Controlled Trial of Asynchronous and Synchronous Telemedicine In Dermatology - RCT-ASTID

Acronym
RCT - ASTID

Study objectives
This randomised controlled trial will compare the traditional out-patient consultation with two different applications of telemedicine for obtaining a specialist dermatological opinion: the first will involve a structured electronic message (including digital, still images); the second a real-time tele-consultation. The objectives are to confirm the equivalence of the accuracy of diagnosis, undertake economic analysis and compare patients' and professionals' opinions.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Primary study design
Interventional

Study design
Randomised controlled trial

Study type(s)
Not Specified

Health condition(s) or problem(s) studied
Skin and connective tissue diseases

Interventions
1. Standard out-patient care
2. Structured electronic message (including digital, still images)
3. A real-time teleconsultation

Intervention Type
Other

Phase
Not Specified

Primary outcome(s)
1. Economic analysis
2. Patients' opinions
3. Professionals' opinion

Key secondary outcome(s)
Not provided at time of registration

Completion date
31/10/2004

Eligibility

Key inclusion criteria
Not provided at time of registration

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Adult

Sex
All

Total final enrolment
208

Key exclusion criteria
