Study information

Scientific Title

Study objectives
To evaluate the effects of leisure therapy and conventional occupational therapy (OT) on the mood, leisure participation and independence in Activities of Daily Living (ADL) of stroke patients six months and twelve months after hospital discharge.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Primary study design
Interventional

Study design
Randomised controlled trial

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Cerebrovascular disease and stroke

Interventions
Community occupational therapy aimed at promoting independence in activities of daily living (ADL) was compared to occupational therapy aiming to promote leisure activity, or no trial intervention. Maximum of 10 visits over six months in treated patients.

Intervention Type
Other

Phase
Not Specified

Primary outcome(s)
1. Personal ADL (Barthel ADL Index)
2. Instrumental ADL (Nottingham Extended ADL scale)
3. Mood (GHQ-12)
4. Leisure activity (abbreviated Nottingham Leisure Questionnaire)
5. Handicap (London Handicap Scale)
6. Global outcome (Oxford Handicap Score, and International Stroke Trial Questions)

Key secondary outcome(s)
Not provided at time of registration

Completion date
31/01/2000

Eligibility

Key inclusion criteria
In 4/5 centres, patients with stroke were recruited at discharge from hospital. In the other centre patients were seen in an out-patient clinic.

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Not Specified

Sex
Not Specified

Key exclusion criteria
Those discharged to institutional care were excluded.

Date of first enrolment
31/01/1997

Date of final enrolment
31/01/2000
