Study information

Scientific Title

A prospective randomised, controlled trial of a single interview session designed to correct misconceptions regarding myocardial infarction thus optimising recovery and uptake of cardiac rehabilitation

Study objectives

Can a single session of cognitive based intervention influence the beliefs that patients who have suffered myocardial infarction hold regarding their heart condition?

Ethics approval required

Old ethics approval format

Primary study design

Interventional

Study design

Randomised controlled trial

Study type(s)

Not Specified

Health condition(s) or problem(s) studied

Myocardial infarction

Interventions

A randomised controlled prospective intervention study involving patients who have undergone myocardial infarction with a 3 and 6 month postal questionnaire follow up.

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

Change in illness beliefs, uptake of cardiac rehabilitation, physical and emotional functioning.

Key secondary outcome(s)

Not provided at time of registration

Completion date

01/07/2003

Eligibility**Key inclusion criteria**

Not provided at time of registration
