Study information

Scientific Title
ProspeCtive observational LongitudinAl RegIstry oF patients with stable coronary arterY disease

Acronym
CLARIFY

Study objectives
Most of the data pertaining to patients with stable coronary artery disease come from randomised clinical trials involving highly selective patient population. This large international observational registry will attempt to provide contemporary information regarding characteristics, management and outcomes of outpatients with stable coronary artery disease.

Ethics approval required
Old ethics approval format

Ethics approval(s)
National Research Ethics Service, Isle of Wight, Portsmouth and Southeast Hampshire Research Ethics Committee, UK approved on 20/11/2009. All other centres obtained ethics approval before recruitment of the first participant.

Study design
Multicentre prospective observational longitudinal study

Primary study design
Observational

Study type(s)
Screening

Health condition(s) or problem(s) studied
Coronary artery disease

Interventions
The registry attempted to collect representative data for each of the participating countries. Representativeness is ensured by a two-tiered process:
1. Determination of physician type in charge of outpatients with stable CAD in a given country and targeting of an appropriate proportion of each of this physician's specialties
2. For each physician, enrollment of consecutive, eligible patients. The data will be collected prospectively using an electronic standardised international case report form (translated into the local language) at baseline and annually during 5 years follow up (at 12+/-3, 24+/-3, 36+/-3, 48+/-3, and 60+/-3 months).

Intervention Type
Other

Phase
Not Applicable

Primary outcome(s)
Information collected at baseline will include demographics, medical history, risk factors, employment status, physical examination, heart rate, laboratory values (if available), and current chronic medical treatments. Each annual follow-up visit will collect information regarding clinical events, hospitalisations, interventions, death, employment status, physical examination, heart

rate, laboratory values (if available) and current medical therapy (cardiovascular and non-cardiovascular).

Key secondary outcome(s))
No secondary outcome measures

Completion date
30/07/2015

Eligibility

Key inclusion criteria
Outpatients with stable coronary artery disease, proven by history of at least one of the following criteria:
1. Documented myocardial infarction (more than 3 months ago)
2. Coronary stenosis of more than 50% proven by coronary angiography
3. Chest pain with proven myocardial ischemia
4. Coronary artery bypass grafting surgery or percutaneous coronary intervention (more than 3 months ago)

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Adult

Sex
All

Total final enrolment
32954

Key exclusion criteria
1. Patients hospitalised for cardiovascular disease within last 3 months
2. Patients with planned revascularisation
3. Conditions hampering the participation or the 5-year follow-up

Date of first enrolment
01/11/2009

Date of final enrolment
30/07/2015
