Study information

Scientific Title

Maximising clinical applicability of non-invasive methods for optimisation of cardiac pacemakers and effect of optimisation on cardiac efficiency: a non-randomised interventional validation of investigational process trial

Acronym

DRN 453 (BivPace Optimisation)

Study objectives

Assessment of atrioventricular (AV) optimisation on acute systolic blood pressure changes and the effect of this on cardiac efficiency at higher heart rates.

Ethics approval required

Old ethics approval format

Ethics approval(s)

St Mary's REC, 01/10/2008, ref: 08/H0712/65

Primary study design

Interventional

Study design

Non-randomised interventional and observational treatment validation of investigational /therapeutic process trial

Study type(s)

Diagnostic

Health condition(s) or problem(s) studied

Topic: Diabetes Research Network; Subtopic: Type 2; Disease: Cardiovascular disease

Interventions

Optimisation of CRT devices:

1. Patients with existing devices are invited to attend for non-invasive haemodynamic optimisation
2. Patients are temporarily paced biventricularly at high heart rate and optimised using invasive and non-invasive haemodynamic parameters

Study entry: registration only

Intervention Type

Other

Phase

Not Applicable

Primary outcome(s)

1. Acute improvement in systolic blood pressure
2. Cardiac efficiency

Timepoints: End of first year and end of second year

Key secondary outcome(s)

No secondary outcome measures

Completion date

01/04/2011

Eligibility

Key inclusion criteria

1. Chronic systolic heart failure and a biventricular device
2. In sinus rhythm (or atrially paced at rest)
3. Free of frequent ectopy
4. No aortic stenosis
5. Either sex, aged 40 - 90 years

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

All

Key exclusion criteria

1. Severe lung disease
2. Any condition that would preclude participants from lying comfortably on a couch for the duration of the study
3. No admissions, other than the admission related to the procedure for the invasive substudy in the prior month
4. No changes to medications (other than diuretic dose) in the prior month

Date of first enrolment

01/01/2009

Date of final enrolment

01/04/2011
