Study information

Scientific Title

Study objectives
To compare cutting and conical mechanisms for port induction with regard to port fixity to the abdominal wall during laparoscopic surgery.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Primary study design
Interventional

Study design
Randomised controlled trial

Study type(s)
Not Specified

Health condition(s) or problem(s) studied
Surgery: Laparoscopy

Interventions
Group 1: 5mm and 10mm ports with cutting trocars and smooth shaft
Group 2: 5mm and 10mm ports with conical trocars and smooth shaft

Intervention Type
Procedure/Surgery

Phase
Not Specified

Primary outcome(s)
The traction required to partially withdraw the secondary 5mm and 10mm port from the abdominal wall is measured using purpose designed device. The measurements will be taken at the beginning of surgery and every 30mins thereafter until completion of the operation.

Key secondary outcome(s)
Not provided at time of registration

Completion date
01/05/2005

Eligibility

Key inclusion criteria
50 patients will be consented and the study will compare 50 5mm ports and 50 10mm ports in each group.

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Not Specified

Sex
Not Specified

Key exclusion criteria
Not provided at time of registration

Date of first enrolment
01/05/2003

Date of final enrolment
01/05/2005
