Study information

Scientific Title

-

Study objectives
A comparison of two epidural infusion doses for post-operative pain relief and to explore the experience of patients who have undergone epidural pain management.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Primary study design
Interventional

Study design
Randomised controlled trial

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Signs and Symptoms: Post operative pain

Interventions
Randomised controlled trial and telephone interviews for patient centered phase

Intervention Type
Procedure/Surgery

Phase
Not Specified

Primary outcome(s)
Pain relief response to therapy

Key secondary outcome(s)
Not provided at time of registration

Completion date
30/05/2003

Eligibility

Key inclusion criteria
86 patients undergoing major abdominal surgery nursed with epidural for postoperative pain relief, randomised to two groups

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Not Specified

Sex
Not Specified

Total final enrolment
100

Key exclusion criteria
Does not meet inclusion criteria

Date of first enrolment
31/05/2002

Date of final enrolment
30/05/2003

Locations

Countries of recruitment
United Kingdom

England

Study participating centre
