Plain English summary of protocol

Background and study aims
Occupational (work) pressure is recognized as a major source of stress for adults. Long-term stress can contribute to adverse health habits and is a known risk factor in many disease states, increases in absenteeism and a reduction in productivity in the workplace. Because of the prevalence and cost of this problem, an intervention designed to help the stress of staff, which will ultimately lead to the development of emotional well-being, could be beneficial to both employees and employers. Traditionally delivered Mindfulness-Based Stress Reduction (MBSR) programs, which teach core mindfulness concepts, have been well researched with many beneficial healing effects. A potential deterrent to the utilization of a traditionally delivered MBSR program in a workplace setting is the expected participant time commitment. Additional obstacles are a stigma on stress and the absence of a clear link between MBSR content and the workplace. To address these needs, we have created Mindfulness-Based Mental Agility.
The objective of this study is to determine whether Mindfulness-Based Mental Agility training, created for the workplace, is efficacious in decreasing stress of employee while enhancing emotional intelligence, work engagement, resiliency, well-being and mindfulness.

Who can participate?
Participants will be recruited from the WHO EURO and UN City personnel.

What does the study involve?
All participants will complete module 1 of the training (6 weeks). If they wish to continue, they will also complete module 2 (4 weeks).
The intervention is standardized and consists of training built on 2 modules which are delivered online for 1 - 2 hours each week. In order to measure the impact of the full training, follow-up measures for the intervention will be obtained 1 and 6 months after Module 2. In order to measure the impact of Module 1 alone, follow-up measures will be obtained 1 and 6 months after Module 1 if participants don't register for Module 2 of the training.

What are the possible benefits and risks of participating?
Participants will learn new skills and have the benefits related to the mindfulness-based

practice. In addition, participants will receive a personal summary of the evaluations completed during the questionnaires.
Their participation is likely to help us find the impact of the training. Based on these results, the MBMA will be implemented at a larger scale, be offered to a larger population of employees, and integrated into a long-term strategy of Staff Development and Learning.
The researchers do not anticipate any risks from taking part.

Where is the study run from?
World Health Organization, Regional Office for Europe (Denmark)

When is the study starting and how long is it expected to run for?
September 2020 to December 2021

Who is funding the study?
World Health Organization (Switzerland)

Who is the main contact?
Dr Pierre-Olivier Dondoglio
dondogliopi@who.int

Study information

Scientific Title
Mindfulness-based mental agility: impact of a virtual face to face workplace intervention

Acronym
MBMA

Study objectives
The post-intervention evaluations will show a significant decrease in perceived stress as well as increased mindfulness, resiliency, wellbeing, emotional intelligence and work engagement.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Approved 02/11/2020, World Health Organization Ethic Review Committee (Avenue Appia 20, 1211 Geneva, Switzerland; +41 22 791 1479; guraiibm@who.int), ref: 3462

Study design
Interventional cohort study

Primary study design
Interventional

Study type(s)
Quality of life

Health condition(s) or problem(s) studied
Emotional intelligence, resiliency, work engagement, perceived stress, mindfulness, wellbeing.

Interventions
The intervention consists of a mindfulness-based approach delivered via live online meetings. This program is significantly modified from traditional Mindfulness-Based Stress Reduction to create a clear link between mindfulness and the 4 domains of Emotional Intelligence. Module 1 is composed of 1 live online training per week for 6 weeks for a total of 8 hours. Module 2 is

composed of 1 live online training per week for 4 weeks for a total of 8 hours. The teacher is an MD familiar with Mindfulness-Based training and follows internationally recognized Good Practice Guidelines for Mindfulness-based Approaches.

Intervention Type
Behavioural

Primary outcome(s)
Measured at baseline and post-intervention (at 1 month and 6 months):
1. Emotional intelligence (S-PEC)
2. Resiliency (BRS)
3. Work engagement (SMVS)
4. Perceived stress (PSS-10 and a single-item measure of stress symptoms)
5. Mindfulness (MAAS)
6. Well-being (WHO-5)

Key secondary outcome(s))
There are no secondary outcome measures

Completion date
31/12/2021

Eligibility

Key inclusion criteria
Module 1
1. Participation in the information meeting
2. Ensuring commitment towards personal practice
3. Commitment to complete the questionnaires
4. Working for WHO (any office of EURO) or a UN agency based in UN City Copenhagen
5. Greater than 18 years of age

Module 2
1. Completion of Module 1 (minimum 93%)
2. Individual evaluation of medical pre-condition (questionnaire -Annex2- plus individual consultation if one risk factor is identified)
3. Ensuring commitment towards personal practice
4. Commitment to complete the questionnaires for Module 2

Participant type(s)
Healthy volunteer

Healthy volunteers allowed
No

Age group
Adult

Lower age limit
18 years

Sex
All

Key exclusion criteria
There are no exclusion criteria for Module 1

Module 2
1. Medical pre-condition which is a contraindication to the practices taught during Module 2 (e.g. Post-Traumatic Stress Disorder, acute depression).

Participants will be excluded from the study if they end their participation during the training

Date of first enrolment
03/11/2020

Date of final enrolment
25/04/2021
