Study information

Scientific Title

Acronym

RECORD

Study objectives

1. Daily oral Vitamin D or Calcium, or the two in combination, given to people aged 70 or over who have recently been successfully treated for a fracture likely to be related to osteoporosis, will decrease the incidence of subsequent fractures.
2. The cost of any effective regimen will be less than those associated with the fracture prevented

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Prevention

Health condition(s) or problem(s) studied

Primary care

Interventions

Daily oral Vitamin D/Calcium/Vitamin D and calcium in combination/placebo

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

1. New fractures,
2. Cost per avoided new fracture
3. Quality of life gain

Key secondary outcome(s)

Not provided at time of registration

Completion date

30/04/2004

Eligibility

Key inclusion criteria

1. Aged 70 years or over (irrespective of sex)
2. Recent first proximal femoral or other appendicular fracture sustained in a fall or clinical vertebral fracture
3. Attending fracture clinic or hospital in-patient
4. Resident in UK
5. Able to comply with protocol (eg Mini-mental Score greater than 7)
6. Gives consent

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Senior

Sex

All

Key exclusion criteria

1. Multiple or high energy transfer injury
2. Inability to walk prior to presenting fracture without the support of others
3. Suffering from known malignant disease
4. Contraindication to Calcium or Vitamin D
5. Current or recent treatment with more than 200iu daily of Vitamin D, Calcium, Fluoride, Diphosphonate or Calcitonin

Date of first enrolment

18/11/1998

Date of final enrolment

30/04/2004
