Study information

Scientific Title

-

Study objectives
The large implementation of SMOCC will be more (cost-)effective than the usually applied basic dissemination strategies for guidelines.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Ethics approval received from the local medical ethics committee

Study design
Randomised controlled trial

Primary study design
Interventional

Study type(s)
Not Specified

Health condition(s) or problem(s) studied
Chronic Obstructive Pulmonary Disease (COPD), smoking.

Interventions
Large scale implementation of a combined strategy, aimed at the complete GP practice team (education by consultant at the practice, help with detecting smoking COPD patients, supplying materials for patient education, helpdesk/website, reminders by e-mail and phone) versus usual care.

Intervention Type
Other

Phase
Not Specified

Primary outcome(s)
Primary outcome measures will be biochemically validated smoking abstinence at 12 and 18 months.

Key secondary outcome(s))
Secondary outcome measures will be counseling contacts and counseling behaviour of professionals and cessation attempts of patients.

Completion date
01/11/2008

Reason abandoned (if study stopped)
Participant recruitment issue

Eligibility

Key inclusion criteria
1. COPD
2. Smoking
3. Age 40 or more

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Not Specified

Sex
Not Specified

Key exclusion criteria
1. Under control of lung specialist
2. Not Dutch-speaking
3. Serious physical or psychiatric comorbidity
4. Age under 40

Date of first enrolment
01/01/2006

Date of final enrolment
01/11/2008
