Study information

Scientific Title

Study objectives

Which method of gastric bypass offers the best palliation with lowest cost and least mortality and morbidity?

Ethics approval required

Old ethics approval format

Ethics approval(s)

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Surgery: Gastric bypass

Interventions

Patients randomised to receive duodenal stenting or surgical bypass. Followed up until death with analysis of morbidity, mortality, survival, cost, readmission rates, palliation of symptoms and quality of life.

Intervention Type

Procedure/Surgery

Phase

Not Specified

Primary outcome(s)

30 Day mortality, morbidity, cost, quality of life, survival after treatment, recurrent hospital admissions and reasons, successful placement of stents, return to nutrition and level of return to nutrition.

Key secondary outcome(s)

Not provided at time of registration

Completion date

03/01/2004

Eligibility

Key inclusion criteria

35 patients in each group.

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Not Specified

Sex

Not Specified

Key exclusion criteria

Does not match inclusion criteria

Date of first enrolment

03/01/2002

Date of final enrolment

03/01/2004
