Study information

Scientific Title

Study to valuate the potential benefits of a patient information leaflet about driving regulation and mental illness

Study objectives

Whether a patient information leaflet about driving regulations in mental illness improves patient awareness and knowledge of the rules in comparison to current practice.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Primary study design

Interventional

Study design

Randomised controlled trial

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Mental and Behavioural Disorders: Mental disorders

Interventions

1. The study group will receive the leaflet during the first week of admission. Before discharge, a questionnaire will be administered to assess knowledge of driving regulations.
2. The control group will not be given the leaflet but will receive standard advice. The questionnaire will be given to them before discharge.
A score will be ascertain for each patient and the mean score and standard deviation for each group calculated. The results will be subjected to statistical analysis to look for differences between the two groups.

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

1. To improve consistency of information given to patients
2. To give patients information in a form which enables them to understand and remember the regulations more easily

Key secondary outcome(s)

Not provided at time of registration

Completion date

30/09/2003

Eligibility
