Study information

Scientific Title

Study objectives
Can we reduce blood loss associated with total hip replacement by using topical tranexamic acid?

Ethics approval required
Old ethics approval format

Ethics approval(s)
North West MREC Greater Manchester Strategic Health Authority, ref 05/MRE08/10, favourable ethical opinion on 11/04/2005, extended 02/02/2006

Study design
Randomised controlled trial

Primary study design
Interventional

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Musculoskeletal Diseases: total hip replacement

Interventions
Randomised controlled trial

Intervention Type
Drug

Phase
Not Applicable

Drug/device/biological/vaccine name(s)
Tranexamic acid

Primary outcome(s)
Reduction in blood loss

Key secondary outcome(s))
Not provided at time of registration

Completion date
31/12/2006

Eligibility

Key inclusion criteria
Patients having unilateral primary cemented total hip replacement

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Not Specified

Sex
Not Specified

Key exclusion criteria
1. Allergic to tranexamic acid
2. Pregnancy
3. History of DVT/pulmonary embolus
4. Patients involved in other trials
5. Known bleeding problems
6. Concurrent treatment with warfarin
7. Low dose molecular weight heparin or conventional heparin
8. Paget's disease or revision total hip replacement

Date of first enrolment
01/06/2005

Date of final enrolment
31/12/2006

Locations

Countries of recruitment
United Kingdom

England

Study participating centre
Dept of Orthopaedics
Bury
United Kingdom
BL9 7TD
