Study information

Scientific Title

A randomised phase II/III trial of induction chemotherapy followed by Continuous Hyperfractionated Accelerated Radiotherapy (CHART) versus CHART alone in patients with inoperable non-small cell lung cancer

Acronym

INCH

Study objectives

CHART has been shown to improve survival compared to conventional radical radiotherapy. In addition, the Non Small Cell Lung Cancer meta-analysis suggested a survival benefit with the addition of the chemotherapy to conventional radiotherapy. An important question therefore is whether the addition of chemotherapy to CHART might improve survival still further - adding chemotherapy might improve both local and distant control.

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Inoperable non-small cell lung cancer

Interventions

Please note that recruitment to this trial was closed earlier than planned on the 7th December 2007 (initial anticipated end date of recruitment: 12th July 2008) due to poor accrual. 46 patients have been randomised into this trial.

Control arm: CHART alone.

Radiotherapy schedule: 54 Gy in 36 fractions (3 times daily) over 12 consecutive days.

Experimental arm: Induction Chemotherapy followed by CHART. Chemotherapy schedule: 3 x 3 weekly cycles of Cisplatin (80 mg/m²) on weeks 1, 4, 7, Vinorelbine (25 mg/m²) on weeks 1, 2, 4, 5, 7 and 8 followed by 4-6 week interval from day 1 of final dose of Cisplatin then CHART (same as control arm).

Intervention Type

Drug

Phase

Phase II/III

Drug/device/biological/vaccine name(s)

Cisplatin, vinorelbine ditartrate

Primary outcome(s)

Overall survival

Key secondary outcome(s)

1. Progression-free survival
2. Response
3. Toxicity
4. Quality of Life
5. Tumour Control
6. Cost effectiveness

Completion date

30/05/2009

Eligibility**Key inclusion criteria**

1. Histologically or cytologically confirmed stage I-III NSCLC, considered suitable for chemotherapy and CHART
2. Inoperable disease as assessed by a lung cancer MDT with thoracic surgical input
3. Previously untreated by chemotherapy or radiotherapy
4. Eastern Cooperative Oncology Group (ECOG) performance status 0 or 1
5. No prior or current malignant disease likely to interfere with protocol treatment

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

All

Key exclusion criteria

1. Medically unstable (e.g. unstable diabetes, uncontrolled arterial hypertension, infection, hypercalcaemia or ischaemic heart disease)
2. Previous or current malignant disease likely to interfere with protocol or comparisons
3. Women who are pregnant or lactating
4. Women of childbearing potential who are not practising adequate contraceptive precautions

Date of first enrolment

01/05/2005

Date of final enrolment

14/12/2007
