Study information

Scientific Title
A comparison of patient outcome from a rheumatology nurse practitioner clinic compared to standard outpatient care: a randomised controlled trial

Study objectives
Added 27/03/2009:
To assess whether OA patients attending a clinical nurse specialist (CNS) clinic gain 'additional benefit' compared with those attending a traditional junior hospital doctor (JHD) clinic.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Primary study design
Interventional

Study design
Randomised controlled trial

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Rheumatoid arthritis, osteoarthritis

Interventions
Patients were seen by either the physician or the nurse who managed their care for a 12 month period so they received either medical or nursing care.

Intervention Type
Other

Phase
Not Applicable

Primary outcome(s)
Added 27/03/2009:
1. Non-inferiority of the CNS with respect to clinical outcomes:
1.1. Pain
1.2. Morning stiffness
1.3. Self-efficacy
1.4. Physical function
1.5. Psychological status
2. Superiority of the CNS in terms of patient knowledge and satisfaction

Key secondary outcome(s)
No secondary outcome measures

Completion date

31/12/2004

Eligibility

Key inclusion criteria
Any patient over 18 years of age with a positive diagnosis of rheumatoid arthritis or osteoarthritis

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Adult

Lower age limit
18 Years

Sex
All

Key exclusion criteria
Does not comply with inclusion criteria

Date of first enrolment
01/01/2004

Date of final enrolment
31/12/2004
