Study information

Scientific Title

Cognitive Behavioural Case Management (CBCM) in First-Episode Schizophrenia and Related Psychotic Disorders - a pilot study

Study objectives

Will a group of participants with first episode psychosis (FEP) receiving CBCM report lower levels of psychopathology, better psychosocial functioning and quality of life, greater service satisfaction and be more engaged with treatment than a group of participants with FEP receiving treatment-as-usual at the end of a 12 month intervention and at an 18 month follow-up?

Ethics approval required

Primary study design

Interventional

Study design

Pilot randomised controlled trial

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Mental and Behavioural Disorders: Schizophrenia

Interventions

[A] Cognitive Behavioural Case Management
[B] Treatment-as-usual

Intervention Type

Other

Phase

Not Applicable

Primary outcome(s)

Quality of Life Survey

Key secondary outcome(s)

1. Brief psychiatric rating scale (expanded version)
2. Montgomery-Asberg Depression Rating Scale
3. WHOQOL-BREF
4. Social and Occupational Functioning Assessment Scale
5. Addition Severity Scale
6. Illness Duration Interview
7. Pathways to care item (from CORS)

8. Premorbid Adjustment Scale
9. Verona Service Satisfaction Scale
10. An engagement measure
11. Socio-demographic & Service Receipt Inventory
12. SCID-P
13. OCPRT

Completion date

07/03/2006

Eligibility

Key inclusion criteria

12-15 patients with first-episode psychosis, recruited from Bath & North East Somerset and North Somerset localities in the Avon & Wiltshire Mental Health Partnership NHS Trust.

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Not Specified

Sex

Not Specified

Key exclusion criteria

1. Presence of organic mental disorder
2. Mental retardation
3. Inadequate command of language

Date of first enrolment

08/03/2005

Date of final enrolment

07/03/2006
