Study information

Scientific Title

Acronym

SPT

Study objectives

Does allergy assessment and appropriate advice in general practice enhance the care of patients with asthma and rhinitis and is it cost effective compared with routine medical care?

Ethics approval required

Old ethics approval format

Ethics approval(s)

Ethics approval received from the Multicentre Research Ethics Committee on the 26th May 2003 (ref: MREC/02/10/13).

Primary study design

Interventional

Study design

Randomised controlled trial

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Asthma and rhinitis

Interventions

Allergy intervention - structured allergy history and skin prick testing and appropriate advice on allergy avoidance versus routine medical care

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

1. Symptom scores (validated scale for asthma and rhinoconjunctivitis)
2. Health-related quality of life (using child or adult specific instruments)

Key secondary outcome(s)

1. Patients' subjective assessment of symptomatic improvement
2. Change in patient management (introduction or withdrawal of allergen avoidance)

Completion date

01/05/2008

Eligibility**Key inclusion criteria**

Patients with a working diagnosis of asthma and/or rhinoconjunctivitis

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

All

Key exclusion criteria

1. Less than 5 years or greater than 50 years
2. Terminal illness
3. Confusional state
4. History of anaphylaxis
5. Tested in the preceding two years

Date of first enrolment

01/05/2006

Date of final enrolment

01/05/2008

Locations

Countries of recruitment

United Kingdom

England

Study participating centre
