Study information

Scientific Title

Study objectives
Toxicity, response and survival.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Primary study design
Interventional

Study design
Randomised controlled trial

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Breast cancer

Interventions
Randomisation will be stratified by previous anthracycline exposure.
1. Vinorelbine 25mg/m^2 intravenous (IV) 30 min DI + 8q 21 days. Capecitabine 1 g/m^2 orally, twice daily for 14 in every 21 days.
2. Docetaxel 75 mg/m^2 IV 60 min every 21 days with dexamethasone 8 mg twice daily for three days starting 24 hours before each docetaxel treatment. Capecitabine 1 g/m^2 orally, twice daily for 14 in every 21 days.

Added 17 July 2008: the trial closed in 2006 due to poor recruitment.

Intervention Type
Drug

Phase
Phase II

Drug/device/biological/vaccine name(s)
Vinorelbine and capecitabine

Primary outcome(s)
Toxicity, response and survival.

Key secondary outcome(s)
Not provided at time of registration

Completion date
25/11/2005

Reason abandoned (if study stopped)
Poor recruitment

Eligibility

Key inclusion criteria
Metastatic breast cancer following initially histologically proven adenocarcinoma of the breast.

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Not Specified

Sex
Female

Key exclusion criteria
Exclusions include previous treatment with vinorelbine, docetaxel or capecitabine and presence of other primary cancers.

Date of first enrolment
01/04/2002

Date of final enrolment
25/11/2005

Locations

Countries of recruitment
United Kingdom
