Plain English summary of protocol

Background and study aims

The ONE programme involves training for preschool staff, and guided play activities delivered by preschool staff. The ONE programme aims to support children's numeracy and thinking skills. The thinking skills that The ONE programme aims to support are sometimes called executive functions. Executive functions, such as focusing attention, ignoring distractions and thinking flexibly, are important for Early Years numeracy skills even before going to school. This study wants to find out if The ONE programme improves these skills.

What participation in the study involves

Children aged 3 and 4 years old in the academic year 2023/24, who will be starting school in the next academic year in early years settings (such as nurseries and pre-schools) enrolled in the trial can participate. These will include private, voluntary and independent early years settings and maintained settings. Settings will be in London, East of England, East Midlands, and Yorkshire and Humber.

What does the study involve?

Up to 150 early years settings will be recruited into the study. Half of the settings will implement The One programme in the academic year 2023/24 and half will implement it a year later and will continue to deliver their usual care and learning in the meantime. Maths attainment and executive function for children in the first group of settings will be compared to children in the second group (who will not yet have tried the programme) to find out whether The ONE programme can improve numeracy and thinking skills.

The ONE programme runs for 12 weeks and has two parts. The first involves training for early years staff to run activities designed to improve children's numeracy and thinking skills. The second part involves staff running these activities as part of their preschool's normal day-to-day routine. Staff will be asked to do at least three activities each week for 12 weeks, with each activity taking 5-10 minutes.

At the start of the study, and again at the end of the study, up to 15 children in each preschool will be asked to play some games to assess their maths and thinking skills. Maths skills will be measured using the Early Years Toolbox (EYT) Early Numeracy Assessment. Thinking skills (executive function) will be measured in two different ways. The first, Heads-Knees-Toes-Shoulders Revised (HKTS-R), measures several different thinking skills. The second, Corsi blocks, tests children's visual-spatial memory.

What are the possible benefits and risks of participating?

The evaluation of The ONE practitioner development and activities may help children and preschool practitioners in the future. There are no disadvantages or risks to children from taking part in The ONE programme activities or assessment games.

Where is the study run from?

The ONE programme is designed and run by a team comprising academics from the University of Oxford and the University of Sheffield. RAND Europe is responsible for the independent evaluation.

When is the study starting and how long is it expected to run for?

October 2022 to July 2024

Who is funding the study?

1. The Education Endowment Foundation (EEF)
2. Stronger Practice Hubs (SPH)

Study information

Scientific Title

Embedding executive challenge into early maths: A randomised controlled trial

Acronym

The ONE

Study objectives

There is a significant difference in maths attainment - as measured by the Early Numeracy Assessment from the Early Years Toolbox - of children in the year before entering Reception in early years settings receiving The ONE intervention in comparison to those in control settings receiving business-as-usual care and learning.

There is a significant difference in executive functioning, as measured by Heads-Toes-Knees-Shoulders (HTKS-R) and Corsi blocks, of children in the year before entering Reception in early years settings receiving The ONE intervention in comparison to those in control settings receiving business-as-usual care and learning.

Study design

Multi-centre interventional two-arm waitlisted cluster randomized controlled trial

Primary study design

Interventional

Study type(s)

Efficacy

Health condition(s) or problem(s) studied

Early numeracy and executive function in children ages 3-4

Interventions

Random allocation into the intervention and control groups will take place at the level of early years settings (pupils aged 3-4).

Control settings will deliver instruction as usual whilst treatment settings will deliver instruction using The ONE programme.

Treatment settings will deliver The ONE programme, a 12-week intervention consisting of professional development for practitioners to run fun, short, play-based activities designed to support children's early thinking and numeracy skills. Practitioners in participating early years settings receive a four-week training course consisting of weekly 30-minute face-to-face training sessions with the delivery team at the start of the programme. Practitioners in each setting are also asked to deliver a minimum of three numeracy activities per week for the 12-week duration of the programme. These activities are drawn from a set of 25 activity cards developed by the delivery team, which describe maths activities and highlight how to gradually increase executive function demands within maths learning. The activities last five to ten minutes each and can be embedded into pre-school routines such as group activities, free play or outdoor play. Staff have the flexibility to choose how to implement the activities (big groups, small groups, one-to-one, or a combination) and which children to involve, as long as children in the year preceding the move into Reception are included in these activities (3-4 year-olds).

Intervention Type

Behavioural

Primary outcome(s)

Maths attainment will be measured using the Early Years Toolbox (EYT) Numeracy measure, 0 – 120 scale at baseline and endline

Key secondary outcome(s)

1. Executive functioning (composite measure) will be measured using Heads, Toes, Knees and Shoulders (HTKS-R) 0-118 scale at baseline and endline
2. Executive functioning (visual-spatial) will be measured using Corsi blocks, 0-15 scale, at baseline and endline

Completion date

31/07/2024

Eligibility

Key inclusion criteria

1. Children aged 3 and 4 years old in the academic year 2023-24 who are due to start school in the following academic year
2. Children attending enrolled early years settings
3. Private, voluntary and independent (PVI) settings and maintained early years settings in the following regions: London; East of England; East Midlands; and Yorkshire and Humber
4. Settings hosting 15 or more children due to enter Reception in September 2024

Participant type(s)

Learner/student

Healthy volunteers allowed

No

Age group

Child

Lower age limit

3 years

Upper age limit

4 years

Sex

All

Total final enrolment

1859

Key exclusion criteria

1. Children in enrolled settings who are not aged 3 and 4 in the academic year 2023-24
2. Children who do not attend one of the enrolled early years settings
3. Children whose parents choose to withdraw them from the study
4. Settings outside of the regions of London, East of England, East Midlands, and Yorkshire and Humber

Date of first enrolment

15/03/2023

Date of final enrolment

31/10/2023

Results and Publications

Individual participant data (IPD) sharing plan

The datasets generated and analysed during the current study will be stored in a publicly available repository (Office for National Statistics). This data will not be personally identifiable. The EEF's webpage on the project is here: <https://educationendowmentfoundation.org.uk/projects-and-evaluation/projects/the-one-project-2022-23-trial>. The type of data stored are demographic information such as gender and eligibility for free school meals, child assessment scores, school attended. SRS-accredited researchers can apply to the EEF for access, setting out why they wish to use the data. The final report is due to be published in Autumn 2024. Data will be available in the SRS around 6 months – 1 year after this. The basis for RAND Europe's use of children's data is legitimate interest. Parents are given the option to withdraw their child from study. Participant data will be linked to NPD (National Pupil Database) data in the ONS SRS using pupil-matching references (thereby removing participant identifying information). There are no ethical or legal restrictions.
