Study information

Scientific Title

The effect of nerve sparing anterior resection on erectile function and the prospect of therapeutic early intervention: a randomised controlled trial

Study objectives

The effect of a combination of nerve sparing resection and therapy with sildenafil on function following anterior resection.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Primary study design

Interventional

Study design

Randomised controlled trial

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Erectile dysfunction

Interventions

Patients undergoing anterior resection to be randomised between sildenafil versus placebo

Intervention Type

Drug

Phase

Not Applicable

Drug/device/biological/vaccine name(s)

Sildenafil

Primary outcome(s)

Not provided at time of registration

Key secondary outcome(s)

Not provided at time of registration

Completion date

25/12/2004

Eligibility**Key inclusion criteria**

Patients with rectal carcinoma

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

Male

Key exclusion criteria

Does not match inclusion criteria

Date of first enrolment

01/10/1999

Date of final enrolment

25/12/2004
