Study information

Scientific Title
The safety and comfort of early mobilisation following day case coronary angiography

Study objectives

It is hypothesised that complications will not be increased by early mobilisation and that patient comfort will be improved.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Surgery: Coronary angiography

Interventions

Randomisation of patients to either control or experimental group. Control group will mobilise at 4 hours (current practice) experimental group will mobilise at 1.5 hours. Other than ambulation time, each group will be treated identically.

Intervention Type

Procedure/Surgery

Phase

Not Specified

Primary outcome(s)

1. Haematoma size
2. Complication rate: pseudoaneurysm, presence of bleeding.

Key secondary outcome(s)

Not provided at time of registration

Completion date

30/09/2005

Eligibility

Key inclusion criteria

All patients able to attend for day case angiography.

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

Not Specified

Key exclusion criteria
