Study information

Scientific Title

Study objectives

Is the risk of a recurrent infection reduced by performing a line change on a peritoneal dialysis (PD) patient when patients present with peritonitis?

Ethics approval required

Old ethics approval format

Ethics approval(s)

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Not Specified

Health condition(s) or problem(s) studied

Infections and Infestations: Peritonitis

Interventions

Antibiotics and no line change compared to antibiotics and a line change

Intervention Type

Other

Phase

Not Applicable

Primary outcome(s)

To evaluate whether recurrence of peritonitis is more common in patients who present with peritonitis and receive antibiotics and no line change compared to patients who receive antibiotics and a line change.

Key secondary outcome(s)

Not provided at time of registration

Completion date

01/06/2003
