Study information

Scientific Title

Study objectives
1. To study the mechanism by which inflammatory response to cardiopulmonary bypass is modulated by oxidant stress
2. To use an ex-vivo model of cardiopulmonary bypass (CPB) and blood samples from patients to investigate oxygen free radicals on the pathogenesis

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Primary study design
Interventional

Study design
Randomised controlled trial

Study type(s)
Not Specified

Health condition(s) or problem(s) studied
Surgery: Cardiovascular

Interventions
The project is composed of laboratory based investigation and the molecular changes associated with the re-circulation of blood in an artificial surface will be studied using a surrogate model of CPB. A total of 400 patients will be randomised to one of the groups: IHD with and without Hypertension, IHD with and without Hypercholesterolemia, IHD with and without Diabetes, Healthy control.

Intervention Type
Procedure/Surgery

Phase
Not Specified

Primary outcome(s)
Proinflammatory cytokines, antioxidant capacity, oxygen free radicals and clinical outcomes.

Key secondary outcome(s)
Not provided at time of registration

Completion date
30/09/2006

Eligibility

Key inclusion criteria

Patients with ischaemic heart disease (IHD) scheduled for elective cardiac operations will be selected.

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Not Specified

Sex
Not Specified

Key exclusion criteria
Not provided at time of registration

Date of first enrolment
05/12/2003

Date of final enrolment
30/09/2006

Locations
