Study information

Scientific Title

Study objectives

To test the effectiveness and the acceptability of vitamin E and low-dose aspirin, alone or in combination, as treatment for prolonged vaginal bleeding induced by Norplant.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Contraception

Interventions

Patients are randomised to one of four different 10-day oral treatments:

1. 200 mg vitamin E daily
2. 80 mg aspirin daily
3. Both of the above
4. Placebo

Intervention Type

Supplement

Phase

Not Applicable

Drug/device/biological/vaccine name(s)

Vitamin E, low-dose aspirin

Primary outcome(s)

Not provided at time of registration

Key secondary outcome(s))

Not provided at time of registration

Completion date

01/01/2003

Eligibility**Key inclusion criteria**

1. Women aged 18 - 38 years
2. 1 - 6 months post Norplant insertion
3. Non-lactating
4. Experiencing an episode of vaginal bleeding lasting more than 7 days

Participant type(s)

Patient
