Study information

Scientific Title
Frenchay family and friends health promotion study

Study objectives
To identify the effectiveness of two interventions that aimed to promote smoking cessation among adult smokers visiting friends or relatives who were hospital in-patients.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Primary study design
Interventional

Study design
Randomised controlled trial

Study type(s)
Not Specified

Health condition(s) or problem(s) studied
Mental and behavioural disorders: addiction

Interventions
1. (SN) screened by a specialist nurse, and then offered a minimum of three further appointments with the specialist nurse over a 12-month period, in which participants were given counselling regarding smoking cessation and other appropriate behavioural change, supported by appropriate health education material.
2. (GP) screened and counselled by a specialist nurse on one occasion and then advised to seek further advice from their GP.
3. Control group receiving no intervention within the 12-month study period.

Intervention Type
Other

Phase
Not Applicable

Primary outcome(s)
Smoking status at 12 months follow-up validated by salivary cotinine.

Key secondary outcome(s)
Not provided at time of registration

Completion date
30/09/1998
