Study information

Scientific Title
A study investigating the cardioprotective benefits of remote ischaemic postconditioning in different clinical settings of myocardial ischaemia-reperfusion injury

Study objectives
The study proposes to examine the cardioprotective potential of 'remote ischaemic postconditioning' in the clinical setting of percutaneous coronary angioplasty using transient fore-arm ischaemia.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Joint UCL/UCLH Committees on Ethics of Human Research (Committee Alpha), 15/09/2005, ref: 05/Q502/102

Primary study design
Interventional

Study design
Multicentre randomised interventional treatment trial

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Topic: Cardiovascular, Neurological; Subtopic: Cardiovascular (all Subtopics), Neurological (all Subtopics); Disease: Cardiovascular, Nervous system disorders

Interventions
Control arm:
Uninflated blood pressure cuff will be placed on the patients's upper arm for the duration of 30 minutes.

Intervention arm:
Inflation of a blood pressure cuff placed around the upper arm. The cuff will be inflated to 200 mmHg for 5 minutes after which it will be deflated for 5 minutes. This procedure will be repeated up to three times in total based on randomisation protocol.

Intervention Type
Other

Phase
Not Applicable

Primary outcome(s)
Myocardial injury, measured by cTnT and CK-MB release over 24 hours after PCI.

Key secondary outcome(s)
1. All-cause mortality, recurrence of symptoms, heart failure and hospitalisation at 1 year after primary percutaneous coronary intervention (PCI)
2. Major adverse cardiovascular events (MACE) at 1 year
3. Myocardial infarct size, 3 months after primary PCI as measured by cardiac magnetic

resonance imaging (MRI)
4. Myocardial infarct size and myocardial salvage ratio (infarct size/area at risk) as measured by cardiac MRI

Completion date
06/11/2011

Eligibility

Key inclusion criteria
1. Patients undergoing percutanous coronary interventions in the elective and emergecy setting and patients undergoing thrombolysis for acute myocardial infarction
2. Aged greater than 18 years and less than 85 years
3. Male and female patients

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Adult

Lower age limit
18 Years

Sex
All

Key exclusion criteria
1. Aged less than 18 years and greater than 85 years
2. Patients with severe renal impairment (estimated glomerular filtration rate [EGFR] less than 45 ml/min/1.73m2)
3. Patients with severe hepatic impairment
4. Patients with cardiac arrest in the previous 6 weeks

Date of first enrolment
01/06/2008

Date of final enrolment
06/11/2011
