Study information

Scientific Title
Does early compression therapy following deep vein thrombosis prevent development of post-thrombotic limb syndrome?

Study objectives
To assess the benefits of early high grade compression in patients with recent first episode proximal deep vein thrombosis.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Primary study design
Interventional

Study design
Single-blinded randomised controlled study

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Cardiovascular: Deep vein thrombosis (DVT)

Interventions
1. Patients wear compression stockings for 6 months
2. No stockings

Please note, this trial was stopped in 2004 due to poor recruitment.

Intervention Type
Other

Phase
Not Specified

Primary outcome(s)
Venous function

Key secondary outcome(s)
Not provided at time of registration

Completion date
01/04/2006

Reason abandoned (if study stopped)
Participant recruitment issue

Eligibility

Key inclusion criteria
250 patients with first episode single limb, proximal vein thrombosis.

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Not Specified

Sex
Not Specified

Key exclusion criteria
Not provided at time of registration

Date of first enrolment
01/06/2003

Date of final enrolment
01/04/2006
