Study information

Scientific Title

Acronym
MINuET

Study objectives
The project will evaluate the acceptability, effectiveness, outcome and cost of upper and lower gastrointestinal endoscopy undertaken by nurses in hospital. We plan to compare:
1. The acceptability to patients of these procedures when undertaken by nurses or doctors
2. The quality of the process of these procedures when undertaken by nurses or doctors
3. The outcome for, and value to, patients of these procedures when undertaken by nurses or doctors
4. The resources consumed by the NHS and patients through these procedures when undertaken by nurses or doctors.

We also plan to develop an economic model to predict the effect of nurse endoscopies on the labour market and training requirements for clinical nurse specialists.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Primary study design
Interventional

Study design
Randomised controlled trial

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Digestive system diseases

Interventions
Endoscopy undertaken by nurses versus doctors

Intervention Type
Other

Phase
Not Specified

Primary outcome(s)
1. Acceptability and anxiety scores, completeness of examination, incidence of technical complications, recording of clinical findings, and need for further investigation or procedure.
2. Incidence of clinical complications, quality of life (generic and disease-specific) measured pre-procedure and at one and 12 months post-procedure.

Key secondary outcome(s)

Not provided at time of registration

Completion date
31/10/2004

Eligibility

Key inclusion criteria
Patients undergoing upper and lower gastrointestinal (GI) endoscopy.

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Not Specified

Sex
Not Specified

Key exclusion criteria
Not provided at time of registration

Date of first enrolment
01/09/2001

Date of final enrolment
31/10/2004
