Protocol serial number
OV06

Study information

Scientific Title

A randomised trial of interval debulking surgery in epithelial ovarian cancer suboptimally debulked at primary surgery

Study objectives
To determine the impact of interval debulking surgery in newly diagnosed ovarian cancer in patients with residual macroscopic disease after surgery.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Study design
Randomised controlled trial

Primary study design
Interventional

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Ovarian cancer

Interventions
One group interval debulking surgery/control

Intervention Type
Procedure/Surgery

Primary outcome(s)
Survival, progression-free survival and quality of life

Key secondary outcome(s))
Not provided at time of registration

Completion date
26/07/2001

Eligibility

Key inclusion criteria
1. Newly diagnosed, histologically confirmed epithelial ovarian cancer
2. International Federation of Gynecology and Obstetrics (FIGO) stage II, III or IV
3. Residual macroscopic disease more than 1 cm in diameter documented at primary surgery or post-operatively by imaging
4. Patient planned to receive platinum-based chemotherapy
5. Patient fit for interval debulking surgery
6. No concomitant or previous malignancy likely to interfere with protocol treatments or

comparisons
7. Written informed consent

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Not Specified

Sex
Female

Key exclusion criteria
Not provided at time of registration

Date of first enrolment
01/04/1998

Date of final enrolment
26/07/2001
