Study information

Scientific Title
BackActive: exposure in vivo in chronic low back pain patients

Acronym

BackActive

Study objectives

It is hypothesized that in chronic low back pain patients with fear of movement/(re)injury, exposure in vivo will be more effective in reducing functional disability levels than the usual graded activity treatment.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Received from local medical ethics committee

Study design

Multicentre randomised single-blind active-controlled parallel-group trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Low back pain

Interventions

Participants are randomly assigned to either exposure in vivo or behavioural graded activity. Through exposure in vivo, participants are motivated to perform activities, through which fear of movement/(re)injury and functional disability are decreased. Graded activity gradually increase physical activity levels by means of positive reinforcement and time contingency principles.

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

To evaluate the (cost-)effectiveness of a graded exposure in vivo treatment as compared to behavioural graded activity in patients with chronic low back pain who report substantial pain-related fear.

Primary outcome measures: functional disability, generic functional status

Key secondary outcome(s)

Physical activity level

Completion date

01/09/2007

Eligibility

Key inclusion criteria

1. Non-specific low back pain
2. Duration of pain disability 3 months or more
3. Age between 18-65 years
4. Substantial pain-related fear (Tampa Scale for Kinesiophobia >33)

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Lower age limit

18 years

Upper age limit

65 years

Sex

All

Key exclusion criteria

1. No consent
2. Illiteracy
3. Pregnancy
4. Substance abuse
5. Involvement in any litigation concerning disability income
6. Specific medical disorders and cardiovascular diseases, preventing participation at physical exercise
7. Low back pain attributable to recognizable pathology (e.g. infection, tumor, osteoporosis, rheumatoid arthritis, fracture, or inflammatory process, prolapsed intervertebral disc)
8. Psychopathology: pretest criteria applied to a standardized test, the SCL-90 and Beck Depression Inventory
9. Patients with restricted disability due to their back pain (Roland Disability Questionnaire score <4)

Date of first enrolment

01/09/2003

Date of final enrolment

01/09/2007
