Study information

Scientific Title

Salivary gland protection from iodine-131 therapy; evaluation of salivary stimulating tablets efficacy using 131 iodine dosimetry and salivary gland scintigraphy

Study objectives

To compare iodine-131 salivary gland dosimetry in patients taking SST and those under a standard treatment protocol (sucking sweets).

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Primary study design

Interventional

Study design

Non blinded randomised controlled trial

Study type(s)

Not Specified

Health condition(s) or problem(s) studied

Digestive System: Salivation

Interventions

Randomised test intervention versus standardised intervention, non-blinded (Phase 3).

Intervention Type

Other

Phase

Phase III

Primary outcome(s)

If this study shows that SST has efficacy in salivary radioprotection then this could then be incorporated into standard radioiodine treatment protocols.

Key secondary outcome(s)

Not provided at time of registration

Completion date

31/12/2007
