Study information

Scientific Title
A randomised, two-arm, multicentre Gynaecologic Cancer InterGroup trial of adding bevacizumab to standard chemotherapy (carboplatin and paclitaxel) in patients with epithelial ovarian cancer

Acronym
ICON7

Study objectives
To evaluate the efficacy and safety of adding bevacizumab to carboplatin and paclitaxel in patients with epithelial ovarian cancer.

Ethics approval required
Old ethics approval format

Ethics approval(s)
London MREC, 14/09/2006

Primary study design
Interventional

Study design
Randomised (1:1 basis) two-arm multicentre open-label phase III study

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Epithelial ovarian cancer

Interventions
Control arm: carboplatin plus paclitaxel on day 1 every 3 weeks until disease progression or for a maximum of 6 cycles
Research arm: carboplatin plus paclitaxel on day 1 every 3 weeks until disease progression or for a maximum of 6 cycles, with bevacizumab on day 1 every 3 weeks until disease progression or for a maximum of 18 cycles

Intervention Type
Drug

Phase
Phase III

Drug/device/biological/vaccine name(s)
Bevacizumab, carboplatin, paclitaxel

Primary outcome(s)
Progression-free survival (PFS)

Key secondary outcome(s)
1. Overall survival (OS)
2. Response rate
3. Duration of response
4. Toxicity
5. Quality of life (QoL)
6. Health economics
7. Translational (biomarker) research

Completion date
31/10/2008

Eligibility

Key inclusion criteria
1. Written informed consent and able to comply with the protocol
2. Histologically confirmed:
2.1. High risk International Federation of Gynaecology and Obstetrics (FIGO) stage I and II a, with grade 3 or clear cell histology, epithelial ovarian cancer
2.2. FIGO stage IIb - IV (all grades, all histological types) epithelial ovarian cancer
2.3. Fallopian tube or primary peritoneal cancer
3. Patients fit enough to receive protocol treatment
4. Urine dipstick for proteinuria less than 2+ (if urine dipstick is greater than or equal to 2+, 24 hour urine must demonstrate less than or equal to 1 g of protein)

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Adult

Sex
Female

Key exclusion criteria
1. Surgery (including open biopsy), or radiotherapy within the last 4 weeks prior to first dose of bevacizumab or anticipation of interval cytoreductive surgery during study treatment
2. Malignancies other than ovarian cancer within 5 years prior to randomisation, except for adequately treated carcinoma in situ of the cervix and/or basal cell skin cancer
3. Uncontrolled hypertension
4. Current or recent (within 10 days of first dose of study treatment) use of aspirin greater than

325 mg/day
5. Current or recent (within 10 days prior to study treatment start) use of full-dose oral or parenteral anticoagulants or thrombolytic agent for therapeutic purposes (except for line patency)

Date of first enrolment
01/10/2006

Date of final enrolment
31/10/2008
