Study information

Scientific Title

Home visits by a nurse practitioner of patients who have undergone an operation for esophageal carcinoma: a randomized study

Acronym

VETO study

Study objectives

Have home visits performed by a nurse practitioner, compared with standard medical follow-up, a positive impact on the quality of life of patients who have undergone an operation for esophageal carcinoma?

Ethics approval required

Old ethics approval format

Ethics approval(s)

Ethics approval received from the local medical ethics committee

Primary study design

Interventional

Study design

Randomised controlled trial

Study type(s)

Not Specified

Health condition(s) or problem(s) studied

Esophageal cancer

Interventions

Nurse-led follow-up by home visits versus standard medical follow-up (out-patient clinic).

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

Quality of Life.

Key secondary outcome(s)

1. Patient satisfaction
2. Costs

Completion date

01/05/2007

Eligibility

Key inclusion criteria

1. Patients have undergone esophageal cancer surgery
2. Informed consent

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

All

Total final enrolment

109

Key exclusion criteria

Patients are unable to understand the Dutch language.

Date of first enrolment

15/01/2004

Date of final enrolment

01/05/2007
