Study information

Scientific Title
Safety and efficacy study of a nitric oxide generating system for neonatal cannulation

Study objectives

The use of a nitric oxide generating system applied to the skin increases the success of long line placement in neonates.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Primary study design

Interventional

Study design

Randomised controlled trial

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Neonatal Diseases: Cannulation

Interventions

1. Nitric oxide for neonatal cannulation
2. No nitric oxide

Intervention Type

Drug

Phase

Not Applicable

Drug/device/biological/vaccine name(s)

Nitric oxide

Primary outcome(s)

Increased success in percutaneous long line placement in neonates

Key secondary outcome(s)

Not provided at time of registration

Completion date

30/04/2005

Eligibility

Key inclusion criteria

Neonates presenting to neonatal intensive care unit (NICU)

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Neonate

Sex

All

Key exclusion criteria

Not provided at time of registration

Date of first enrolment

01/08/2003

Date of final enrolment

30/04/2005

Locations

Countries of recruitment

United Kingdom

England
